

## ACOUSTIC PLAYERS

Now you can have great tone and volume having a high quality pick up installed in your favorite acoustic guitar. This invisible installation will allow you to plug directly into any amp or P.A. system with no changes in acoustic performance. We recommend the LR Baggs I beam active and installation is free with a Minor Setup. At last, great tone without feedback! We can also improve the tone quality and sustain of most acoustic guitars with the installation of a custom made saddle and nut. For acoustics we recommend bone as the material of choice. For electric acoustics we use bone, Corian or Mircarta as recommended by The Martin Co. These components along with a setup will insure that your guitar sounds and plays it's best for a lifetime of enjoyment. Feel free to call if you have any questions. Call George at 823-3067
